TfL

9200 buses

480 million km  
operated in 2018-  
19

6.5 million  
passengers each  
day

90% London  
households are 5  
minutes or less on foot  
from a bus stop

Customer demand is

# London's population is growing

3,700 cleaner buses are helping improve London's air quality

# Healthy Streets

I'm one of the  
new electric ones

A red and green electric bus is shown from a side profile. The bus features a green livery with a white city map pattern. A large white lightning bolt graphic is positioned on the side of the bus. The text "3,700 cleaner buses are helping improve London's air quality" is written along the top edge of the bus. The text "I'm one of the new electric ones" is written in large white letters on the side of the bus. The bus is parked on a paved street in front of a brick building.

An aerial photograph of London, England, showing a dense urban landscape. The River Thames flows through the center, with several bridges crossing it. The most prominent feature is The Shard, a tall, glass-clad skyscraper that tapers to a point at the top. Other notable buildings include the Gherkin and the Walkie-Talkie. The city extends far into the distance under a clear sky.

## In summary:

- Buses are integral to the growth and success of London's communities
- They're also central to a healthy lifestyle
- Young users are key to the future of the network
- Network must evolve to carry people where they want to go.
